Full-stack Senior Software Engineer with design and product sense, and 10+ years building data-intensive applications and distributed systems. Highly effective at turning ambiguous problems into simple, reliable software across frontend, backend, data, and infrastructure.

Tech Stack: Python, Java, TypeScript, React, Next.js, Django/Flask, Postgres, AWS, Docker, Kubernetes, TailwindCSS

Education

University of Virginia — Charlottesville, VA
M.S. Data Science — *2015*
B.A. Statistics (Econometrics) — *2014*

Experience

Entrepreneur
Pearce Labs, LLC. — *July 2023 – Present*

- Own and operate a digital services agency (**pearcelabs.com**), helping small businesses improve their digital presence and automate operations.
- Built and maintain a free iOS app (**multiborder.io**) that enables photographers to batch-add borders in multiple aspect ratios; earned positive reviews and $100+ in donations.
- Built and maintain a free search engine and interactive graph explorer for the Pathfinder 2e tabletop RPG (**pf2e.fyi**), indexing 24,000+ rules entries and 116,000+ cross-references.
- Co-founded **Lasso**, a two-sided creator–brand marketplace with two-way discovery, customizable creator media kits with audience and engagement metrics, and built-in messaging.
- Co-founded **Wildfire**, a creator analytics product that analyzes Twitter audiences to surface actionable insights and customer profiles to improve monetization.

Staff Software Engineer
XOR Security, Agile Defense, Maximus — *June 2015 – Present*

- Joined XOR Security as an early engineer, grew with company to 150 employees and tens of millions in revenue, acquired by Agile Defense; Agile Defense then acquired for $660m.
- Built and owned a geospatial dashboard product used by hundreds of analysts to monitor and respond to tens of thousands of critical-infrastructure incidents and used by leadership to track thousands of personnel.
- Automated high-volume, mission-critical reports and workflows, cutting delivery time by 50%+ and returning ~25–50 analyst hours/week to higher-value work.
- Led a team of 5 to design and build a Python/React data platform that replaced paper-based workflows with searchable, time-synced views of multi-variate timeseries data, telemetry, geospatial data, video, and audio; cut analysis from days to hours.
- Led a 10-engineer platform/SRE team operating a 60-node data stack (OpenShift, Spark, Elasticsearch, Hadoop) processing 300GB–1TB/day; improved uptime to 95% and cut MTTR 50% via Ansible.
- Led product development for a 10-engineer team across 12+ production applications; built core services (Java/Spring Cloud, Python/Flask, React) for a distributed messaging platform sharing millions of cyber-threat indicators across hundreds of partners; still the Federal Government's flagship cybersecurity sharing platform.
- Led migrations from monolith to microservices and from on-prem to hybrid/cloud (Spring Cloud, AWS, Kubernetes), improving reliability and availability of core services.
- Architected and built Apache NiFi-based ETL pipelines with fine-grained access controls and policy-driven routing, enabling runtime reconfiguration without releases.

Hobbies & Interests: Guitar, music composition, cooking, coffee, photography, film, design, tabletop RPGs, videogames, hiking, fly fishing, sci-fi & fantasy, writing, microelectronics, gardening
