Senior full-stack engineer with 10+ years building products and platforms for time-series, geospatial, and event data at TB/day scale. Joined a cybersecurity startup as employee #8 and grew from engineer to architect as it scaled to 150 people through two acquisitions. M.S. in Data Science, University of Virginia.

Languages	TypeScript, Python, Java, Swift, SQL
Frontend	React, Next.js, Tailwind
Backend	Node.js, FastAPI, Spring, GraphQL, gRPC
Data	Postgres, Redis, Kafka, Spark, Elasticsearch
Infra	AWS, Cloudflare, Kubernetes, Terraform, GitHub Actions
AI	LLM APIs, RAG, pgvector, evals, Claude Code

Experience

XOR Security
Civilian federal cybersecurity (CISA); acquired by Agile Defense, then Maximus — *June 2015 – Present*

Senior Software Engineer — *2022 – Present*

- Sole designer and builder of the operations center's incident-response and workforce-tracking system, under strict no-code, no-procurement security constraints (Microsoft 365, Power Platform). Used by hundreds of analysts across tens of thousands of incidents; briefed to agency leadership and Congress.
- Automated operations and reporting, cutting delivery time 50%+ and saving ~100 analyst hours/week.
- Technical advisor to operations center leadership, turning analyst needs into solutions.

Lead Software Engineer — *2017 – 2022*

- Led a 10-engineer platform/SRE team running a 60-node data platform (OpenShift, Spark, Elasticsearch, Hadoop) processing 300GB–1TB/day; cut MTTR 50% through Ansible automation.
- Led a team of 5 to build a Python/React data platform that replaced paper-based workflows with searchable, time-synced views of time-series, telemetry, geospatial, video, and audio data; cut analysis from days to hours.
- Led product development of a distributed messaging platform built from 12+ production microservices (Java/Spring Cloud, Python/Flask, React), sharing millions of threat-intelligence records with hundreds of partner organizations. It remains the flagship threat-intelligence sharing product.

Software Engineer — *2015 – 2017*

- Architected and led the migration of legacy government systems to microservices and hybrid cloud (Spring Cloud, AWS, Kubernetes), defining service boundaries, deployment patterns, and CI/CD; cut time to production from months to days.
- Designed policy-driven routing and ETL pipelines (Spring Cloud, Python, Apache NiFi) configured through a custom JSON DSL, routing, enforcing schemas, and sanitizing millions of documents per month

Independent Projects

Pearce Labs, LLC
Products built and shipped solo — *2023 – Present*

- **pf2e.fyi**: a free search engine and Obsidian-inspired interactive graph explorer for the Pathfinder 2e RPG, indexing 24,000+ rules entries and 116,000+ cross-references (React, TypeScript, Cloudflare).
- **multiborder.io**: a free iOS app (Swift) that lets photographers batch-add borders in multiple aspect ratios; positive App Store reviews and $100+ in donations.
- **adamhp.photos**: a self-hosted photo blog with automated image upload to Cloudflare R2 to cut costs; groups similar photos with CLIP.

Education

University of Virginia — Charlottesville, VA
M.S. Data Science — *2015*
B.A. Statistics (Econometrics) — *2014*
