Senior full-stack engineer with 10+ years building data platforms, distributed systems, and products end to end. Grew from early engineer to architect at a startup that scaled to 150 people and two acquisitions. Product- and design-minded; ships quickly with AI-assisted development.

Tech Stack: Python, Django, Flask, Java, Spring, React, TypeScript, Postgres, Spark, AWS, Docker, Kubernetes, Claude Code

Experience

XOR Security
Acquired by Agile Defense; acquired by Maximus — *June 2015 – Present*

Solutions Architect — *2022 – Present*

- Built and owned a geospatial monitoring and incident-response dashboard used by hundreds of analysts to triage tens of thousands of infrastructure incidents, and by leadership to track a workforce of thousands.
- Automated high-volume operations and reporting workflows, cutting delivery time 50%+ and freeing ~100+ analyst hours/week.

Lead Software Engineer — *2017 – 2022*

- Led a team of 5 to build a Python/React data platform that replaced paper-based workflows with searchable, time-synced views of time-series, telemetry, geospatial, video, and audio data; cut analysis from days to hours.
- Led a 10-engineer platform/SRE team running a 60-node data platform (OpenShift, Spark, Elasticsearch, Hadoop) processing 300GB–1TB/day; cut MTTR 50% through Ansible automation.
- Led product development across 12+ production applications; built core services (Java/Spring Cloud, Python/Flask, React) for a distributed messaging platform sharing millions of threat-intelligence records with hundreds of partner organizations. Continues to perform as the flagship cyberthreat intelligence sharing product.

Software Engineer — *2015 – 2017*

- Joined as an early engineer and grew with the company to 150 employees and tens of millions in annual revenue, through acquisition by Agile Defense and its later $660M sale.
- Led migrations from monolith to microservices and from on-prem to hybrid cloud (Spring Cloud, AWS, Kubernetes), improving reliability and availability of core services.
- Designed policy-driven ETL pipelines (Apache NiFi) with complex sanitization and dissemination rules, enabling changes at runtime without redeploys.

Founder
Pearce Labs, LLC — *July 2023 – Present*

- Run a software studio (**pearcelabs.com**) building workflow automation and delivering technical consulting for small businesses; build all products solo with agentic, test-first AI workflows (Claude Code).
- Built and maintain **pf2e.fyi**, a free search engine and Obsidian-inspired interactive graph explorer for the Pathfinder 2e RPG, indexing 24,000+ rules entries and 116,000+ cross-references.
- Built and launched **multiborder.io**, a free iOS app that lets photographers batch-add borders in multiple aspect ratios; positive App Store reviews and $100+ in donations.
- Co-founded two creator-economy startups: **Lasso**, a creator–brand marketplace with two-way discovery, media kits, and messaging; and **Wildfire**, Twitter audience analytics for creator monetization.

Education

University of Virginia — Charlottesville, VA
M.S. Data Science — *2015*
B.A. Statistics (Econometrics) — *2014*

Hobbies & Interests: Guitar, music composition, cooking, coffee, photography, film, design, tabletop RPGs, videogames, hiking, fly fishing, sci-fi & fantasy, writing, microelectronics, gardening
