Engineer with 11 years building data-heavy products end to end, from ingest pipelines, to search, to the UI on top, mostly in security and threat intelligence. Joined a cybersecurity startup as employee #8 and grew to tech lead as it scaled to tens of millions in revenue through two acquisitions, leading development of its flagship threat-intelligence sharing platform. Since 2022, co-founded two startups and shipped my own products.

Languages TypeScript, Python, Java, Swift, SQL
Frontend React, Next.js, Tailwind
Backend Node.js, FastAPI, Spring, GraphQL, gRPC
Data Postgres, Redis, Kafka, Spark, Elasticsearch
Infra AWS, Cloudflare, Kubernetes, Terraform, GitHub Actions
AI LLM APIs, RAG, pgvector, evals

Products

Independent products

Designed, built, and shipped solo — *2023 – Present*

- **pf2e.fyi**: static Pathfinder 2e rules reference (51,000+ entries) with in-browser search in a Web Worker, a custom query language, and a WebGL cross-reference graph (React, TanStack Start, TypeScript, Cloudflare).
- **multiborder.io**: iOS app that batch-adds borders to photos, 800+ downloads. Works from the app, share and action extensions, Photos editing, and Shortcuts, with background export (Swift/SwiftUI).
- **adamhp.photos**: self-hosted photo blog that groups similar photos with CLIP (Vite, TypeScript, Cloudflare R2).

Startups

Technical co-founder — *2022 – 2023*

- **Lasso**: creator–brand marketplace with two-way discovery, media kits, and messaging (React, Python).
- **Wildfire**: Twitter audience analytics for creator monetization (Python, Twitter API). Both had early users and revenue but didn't reach product-market fit.

Experience

XOR Security

Cybersecurity startup serving federal customers (CISA); acquired by Agile Defense, then Maximus — *June 2015 – Present*

Senior Software Engineer — *2022 – Present*

- Owned the operations center's incident-response and workforce-tracking system end to end, from requirements and data model to workflows and reporting. Adopted by hundreds of analysts across tens of thousands of incidents. Outputs used in briefings to agency leadership and Congress.
- Automated operations reporting, cutting delivery time 50%+ and saving about 100 analyst hours/week.

Lead Software Engineer — *2017 – 2022*

- Led product development of the company's flagship threat-intelligence sharing platform: 12+ production microservices (Java/Spring Cloud, Python/Flask, React) distributing millions of records to hundreds of partner organizations. Personally rebuilt the ingest pipeline as runtime-configurable stages, cutting ingest time 80% in response to user complaints.
- Led a team of 5 building a Python/React data platform that replaced paper-based workflows with searchable, time-synced views of time-series, telemetry, geospatial, video, and audio data; cut analysis from days to hours.
- Led a 10-engineer platform/SRE team running a 60-node data platform (OpenShift, Spark, Elasticsearch, Hadoop) processing up to 1TB/day; cut MTTR 50% through Ansible automation.

Software Engineer — *2015 – 2017*

- Architected and led the migration of legacy government systems to microservices and hybrid cloud (Spring Cloud, AWS, Kubernetes), defining service boundaries, deployment patterns, and CI/CD; cut time to production from months to days.
- Designed policy-driven routing and ETL pipelines (Spring Cloud, Python, Apache NiFi) configured through a custom JSON DSL, enforcing schemas and sanitizing millions of documents per month.

Education

University of Virginia M.S. Data Science (2015) · B.A. Statistics, Econometrics (2014) — Charlottesville, VA
